```

Out[91]:

## **model1 conclusion:**

- in model1 i have created custom function for categorical data such that for each category it will have specific number and then padded
  - for text data i have used tokenizer . while selecting maxlen i have used around 90 th percentile values

## model2 conclusion:

- i have applied tfidf on corpus . here i have selected words which have idf values greater than 2 and less than 11. because we know rarer the the word it will have high idf value and most occuring words have lower idf values . so i removed those words as they dont carry that much information.
